Course/Module description:

It has become common to claim that we live in a new kind of society and a historically distinctive era: the information society, the digital age. That changes in media technologies have produced a profound revolution in our everyday lives as well as in our larger social, cultural, economic and political structures. Despite the long history of communication, it seems that contemporary digital technologies have not only transformed how we use media, but have made media more central than ever to human civilization.

Focusing on a series of key words in digital culture studies, this course asks: how can we make sense of these developments in communication technologies, and what are their implications for self and society? What is the impact of technological change on personal identity, social relationships, and political behaviour? Is professional journalism viable or even necessary in an age of tweets, blogs and increasing numbers of amateur news images? Are new media really so new, and what happens to "old" media like photography, television, books and music in a digital culture? And what might it mean for us to be perpetually available to others and subject to perpetual surveillance by others - through mobile media?

Course/Module aims:

A critical introduction to the range of research fields dealing new digital media - their communicative characteristics and their social, cultural and political significance.

Learning outcomes - On successful completion of this module, students should be able to:

To explain the major theories and topics in research on communication in the digital age.

To achieve a high level of competence in conceptualizing communicative, social, political and cultural questions concerning new media.

To produce in-depth critical readings of advanced theoretical writings and research in the field.

To compare and contrast central thinkers and schools of thought and to interpret and evaluate their points of similarity and difference.

To analyze contemporary empirical communications and cultural phenomenon in the light of the works studied.
