Prof Dan Mangoubi

Course/Module description:

We follow the book *Irrational numbers* by I. Niven:

- 1)  $e$  is transcendental (Hermite, 1873)
- 2)  $\pi$  is transcendental (Lindemann, 1882)
- 3) Liouville numbers
- 4) Continued fractions
- 5) Hilbert's seventh problem and Gelfond-Schneider's Theorem (1934) If  $a, b$  are algebraic then  $a^b$  is transcendental (unless  $a=0$  or  $1$ ).

Course/Module aims:

Learning outcomes - On successful completion of this module, students should be able to:

Acquaintance with ideas of Diophantine approximation and Transcendental Number Theory.

Attendance requirements(%):

100

Teaching arrangement and method of instruction: Lectures by students

Course/Module Content:

See course description.

Required Reading:

-

Additional Reading Material:

*Irrational Numbers*, Niven.  
*Transcendental Numbers*, Siegel.  
*The Theory of Numbers*, Hardy and Wright.

---

Course/Module evaluation:

End of year written/oral examination 0 %

Presentation 80 %

Participation in Tutorials 20 %

Project work 0 %

Assignments 0 %

Reports 0 %

Research project 0 %

Quizzes 0 %

Other 0 %
