Prof Itay Kaplan

Course/Module description:

An introduction to deeper methods of model theory, especially stability. These methods are important both in intrinsic model-theoretic questions, such as the possible numbers of models, and in applications to diverse areas of algebra, combinatorics and geometry.

Course/Module aims:

An understanding of the above method. Preparation for individual research.

Learning outcomes - On successful completion of this module, students should be able to:

Ability to prove and apply the theorems presented in the course.

Ability to apply correctly the mathematical methodology in the context of the course.

Acquiring the fundamentals as well as basic familiarity with the field which will assist in the understanding of advanced subjects.

Ability to understanding and explain the subjects taught in the course.

Attendance requirements(%):

0

Teaching arrangement and method of instruction: Lectures.

Course/Module Content:

Advanced topics in model theory.

Tarski's theorem on quantifier elimination in the reals. Imaginaries. Local and global stability. Forking. Stable groups. Macintyre's theorem on  $w$ -stable groups.

Other or additional topics may be studied

Required Reading:

none

---

Additional Reading Material:

*Pillay, Anand Geometric stability theory.*

*Stable Groups, Bruno Poizat*

*Essential Stability Theory, Steven Buechler*

*A course in model theory, Katrin Tent, Martin Ziegler*

Grading Scheme:

*Essay / Project / Final Assignment / Home Exam / Referat 60 %*

*Submission assignments during the semester: Exercises / Essays / Audits / Reports  
/ Forum / Simulation / others 40 %*

Additional information:

*none*
